New Hawk 6.0M VFA

Following the success of the Falcon VFA series, we have now completed the design of its capable smaller equivalent in the Hawk. This series carries the larger 125L gear driven pumps for continuous powerful drive when cutting in the toughest of conditions, along with the added bonus of being a 3 point linkage mounted machine.

This machine will be available later this year.

Variable forward reach comes via the parallelogram on the second arm set, and gives 1.6m forward reach (variable) and 0.5m rearward (variable).

Control option is the ICS (intelligent control system) other options include rotor reverse, and arm float.
